# ➤ iYuh Stock Trading

Technological advancement artificial intelligence (AI) has changed the way financial assets are traded.

From stock analysis, order entry, exchanges to back-end matching and clearing, all are highly automated.

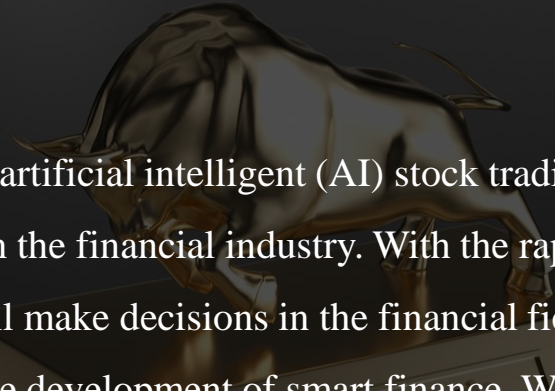

Maximize returns and minimize risks with the Deep Learning algorithms that are trained on years of market data.

Advanced Deep Learning algorithms analyze historical pricing data, technical indicators and market sentiment to predict future prices.

## Company

We are a fintech team from Malaysia, focusing on programming artificial intelligent (AI) stock trading systems to provide industrial services and management for major companies in the financial industry. With the rapid development of science and technology, we believe that artificial intelligence will make decisions in the financial field through “big data + computing power + algorithms + scenarios” and promote the development of smart finance. We are aware that this is an inevitable development trend. iYuho AI is first developed in 2017, and it have been very successful in figuring out how humans learn concepts. iYuho AI analyzes massive amounts of data so large daily, that it would be nearly impossible for human to analyze. It then interprets the complex correlations between the stock’s attributes and identifies meaningful patterns quickly, all while eliminating human errors and emotions.

# ➤ iYuho AI Trading System

It is a process in which advanced deep learning algorithms analyze historical pricing data, technical indicators and market sentiment, then simulates ordering operation to perform machine trading; the computer executes a trading order. The automated trading strategy mainly includes four elements: market analysis, order execution, risk management, and fund management.

## iYuhō AI 3 Types of Machine

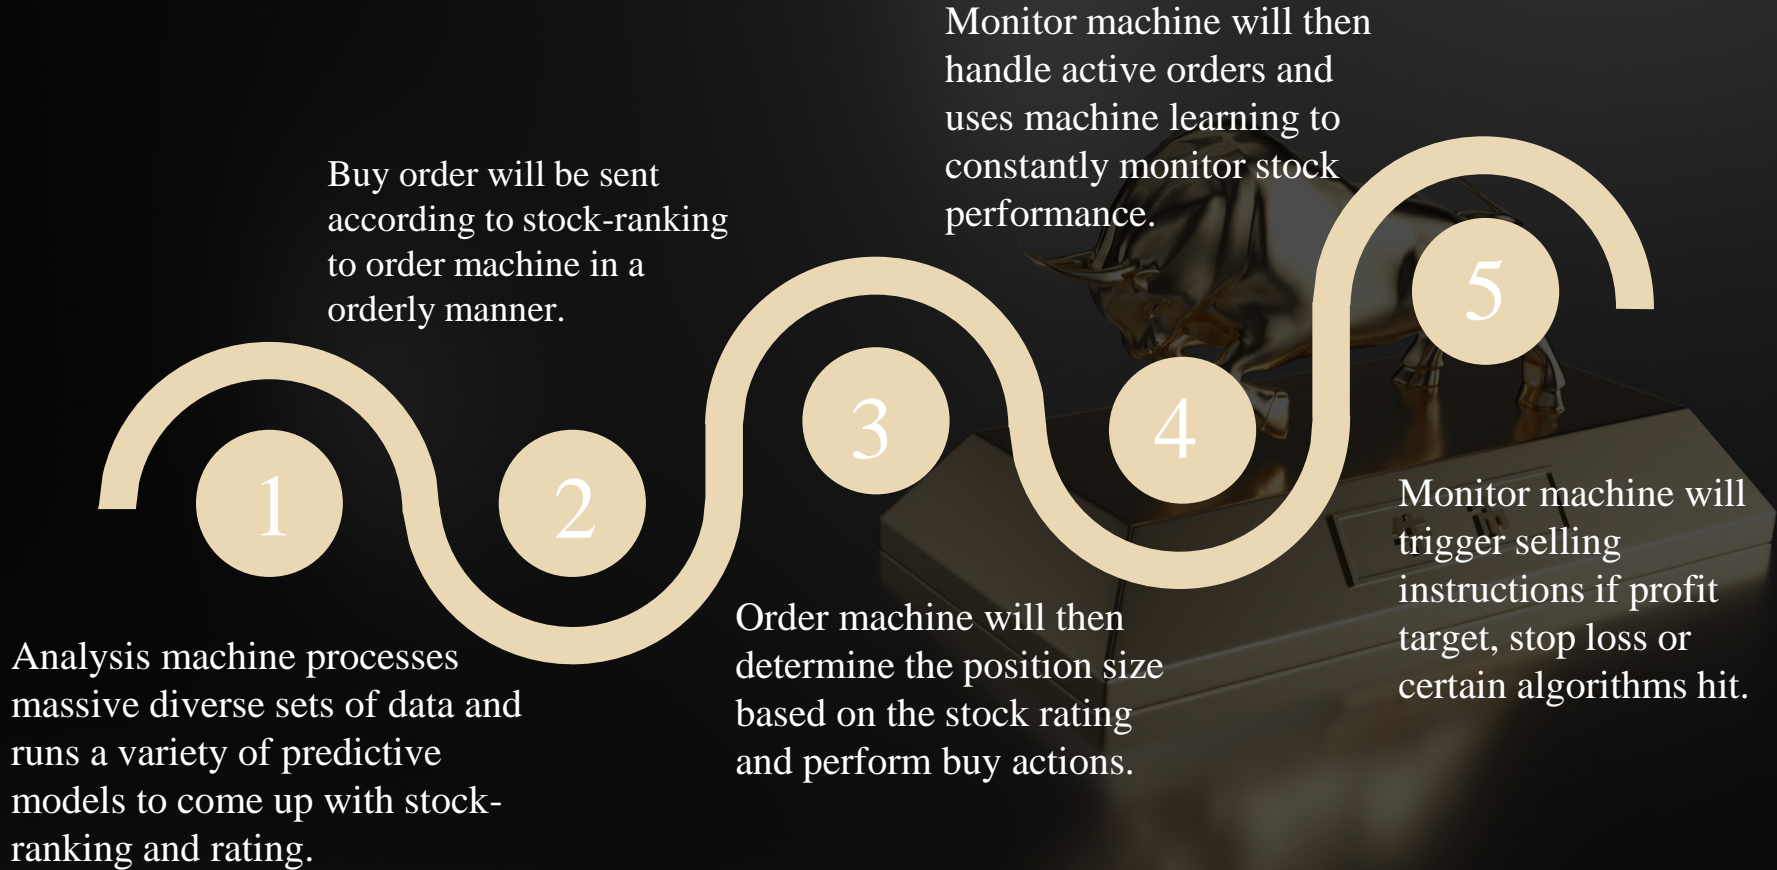

The main execution process of iYuhō can be divided into

This whole trading process is performed 100% by machine, without human interference.

# ➤ iYuhō AI Trading

## ➤ iYoho AI Advantages

- AI automatically place orders, you can ensure faster order placement and closing speed, and can respond more sensitively to price changes and trend changes.
- AI can overcome the weaknesses in human nature. Buy when you buy and sell when you need to sell, avoiding emotional trading.
- AI can constantly monitor the market without interruption, and automatically enter and exit the scene at the appropriate time and point, without human intervention at all, avoid human error.

## ➤ iYoho AI Advantages

- Strict stop loss and risk management, position control, so there will be no excessive trading, no emotional trading, and no unavoidable greed and fear in artificial trading.
- A variety of pre-set orders, multi-accounts, multi-strand multi-tasking automatic execution in lightning speed, different strategy combinations and more.

2 Ways

1

Fundamental Analysis

2

Technical Analysis

## ➤ iYuhō Fundamental Analysis

Fundamental analysis (FA) is a method of measuring a security's intrinsic value by examining related economic and financial factors. Fundamental analysts study anything that can affect the security's value, from macroeconomic factors such as the state of the economy and industry conditions to microeconomic factors like the effectiveness of the company's management.

iYuhō AI will study and compare company revenues, earnings, future growth, return on equity, and other data to determine a company's underlying value.

# ➤ iYuhō Technical Analysis

01

Technical analysis has three main assumptions: that market behavior is inclusive and discounts everything; prices fluctuate in a trend; history repeats itself.

02 By using historical price data, technical analysis attempts to interpret the supply and demand that moves share prices. The big boys can't walk in the sand without leaving footprints. The big boys are the institutions, mutual and hedge funds. They are the participants that move stock prices.

03 iYuhō AI visually tracks the activity of the big boys using various charts and indicators to pinpoint price areas of strong interest both in terms of buying and selling.
